

SELECTED-CONTENT PREVIEW

Knowledge Transfer Assessment Framework

Selected concepts from the four-level assessment model and role mapping.

Preview only. The full purchased package contains the complete working materials.
Adapt and approve materials within the purchaser's own quality system before use.

SELECTED-CONTENT PREVIEW

Knowledge Transfer Assessment Framework

A sample of the four-level assessment model and role-based application.

What the framework covers

A structured way to assess whether people can recall, explain, apply, and integrate job-relevant knowledge. Assessment level depends on the role and the work performed.

Package components represented in the source set

Framework document; two-page quick-start guide; implementation presentation; four-page assessment decision work aid.

This preview shows selected concepts only. It omits the full role matrix, assessment instruments, scoring details, and implementation materials.

SELECTED-CONTENT PREVIEW

Four levels of assessment

Selected framework content, condensed for public viewing.

1 Recall

Retrieve factual information without references.

2 Comprehension

Explain why a procedure exists and what a deviation could change.

3 Application

Use knowledge in a new situation, recognize a deviation, and choose a response.

4 Integration

Connect knowledge across systems and explain or teach the reasoning.

Example role mapping in the source: a manufacturing operator is assigned Recall and Comprehension, with Application for core SOPs. The site must confirm role requirements and approved qualification criteria.
